**JUNE 2013
APACHE COUNTY REPORT
ASTR 2011**

**Prepared by:
Maureen Brophy, MPH
Vatsal Chikani, MPH
Rogelio Martinez, MPH**

Data and Quality Assurance

Purpose:

The purpose of this report is to describe the incidence of trauma in Apache County using the Arizona State Trauma Registry (ASTR). This information can be used to assist in the development and strengthening of injury prevention programs at the county level.

Methods:

In 2011, the Arizona State Trauma Registry (ASTR) received data from 23 state-designated trauma centers. Four additional healthcare institutions participated in the registry but were not designated. The Arizona EMS and Trauma System has eight Level I trauma centers - six located in the central county of Maricopa with 60 percent of the state's population; the remaining two Level I trauma centers are respectively located in the northern-most county of Coconino and the southern county of Pima. For the 2011 reporting year, there were 15 designated Level IV trauma centers dispersed primarily in the rural areas of the state. There are a total of 29,877 records in the ASTR for 2011.

Limitations:

Data is limited to participating agencies in the state. Information on patients that are transported out of Arizona will be missed as well as those seen at hospitals that are not participating. Injuries included in this registry are those which fit the [ASTR inclusion criteria](#). As such, injuries reported are more severe injuries, and therefore not a complete picture of injury in Apache County.

Geo-Population:

Arizona is 400 miles long and 310 miles wide for a total area of 114,006 square miles. The topography of the state is 364 square miles of water and a blend of deserts, mountains, and plateaus. Arizona shares contiguous borders with the states of California, Colorado, Nevada, New Mexico, and Utah. Internationally, the Mexican states of Sonora, Chihuahua, and Baja California Norte share a border with Arizona.

The total reported population in 2011 was 6,438,178; this was up from the 2010 reported number of 6,392,017 residents ¹. In 2011, 84.1 percent of the population lived in urban counties (Maricopa, Pima, Pinal, and Yuma). The remaining counties (Apache, Cochise, Coconino, Gila, Graham, Greenlee, La Paz, Mohave, Navajo, Santa Cruz, and Yavapai) were home to 15.9 percent of the population.

Additionally, Arizona has within its borders twenty-two (22) federally recognized American Indian tribes, comprising a 2011 collective population of 296,529, of which 162,119 (55 percent) reside on reservations and tribal lands.

Missing = 529

Statewide, there were 29,877 traumatic injuries seen at state designated trauma centers– a rate of 456 per 100,000 Arizona residents.

Apache County makes up about one percent of the total population of Arizona. Injuries occurring in the county make up about 1.7 percent of the trauma cases from state designated trauma centers. The county-specific trauma rate, 704 per 100,000 county residents, is higher than the state average (Figure 3).

FIGURE 3: County-specific trauma rates per 100,000 residents

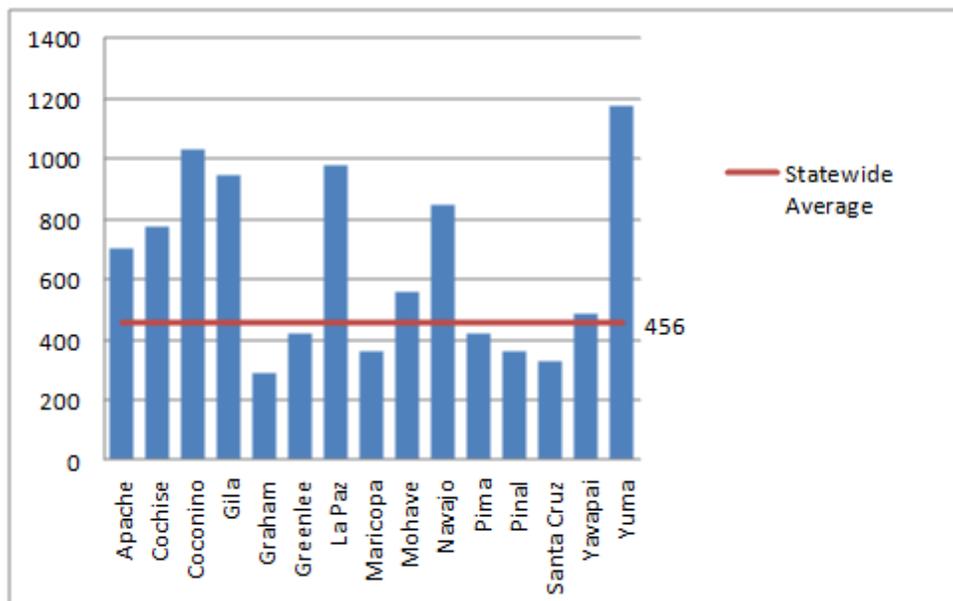

FIGURE 4: Frequency and rate of trauma by age, race/ethnicity, and gender in Apache County

Demographics		Count	Percent	Rate per 100,000
Age	<1	*	*	*
	1-4	*	*	*
	5-9	19	3.7%	313
	10-14	17	3.4%	265
	15-19	47	9.3%	689
	20-24	69	13.6%	1,452
	25-34	96	18.9%	1,214

	Other	104	20.5%	561
Total		507	100%	456

*10 or fewer observations

The trauma rate is higher in Apache County for all age groups except the 1-4 and 10-14 age groups (Figure 4), as compared to the rest of the state. The highest trauma rate is among the >85 age group (1,552 traumatic injuries per 100,000 county residents), due to the small number of Apache County residents that are within that age group.

FIGURE 5: Trauma rate per 100,000 residents by age

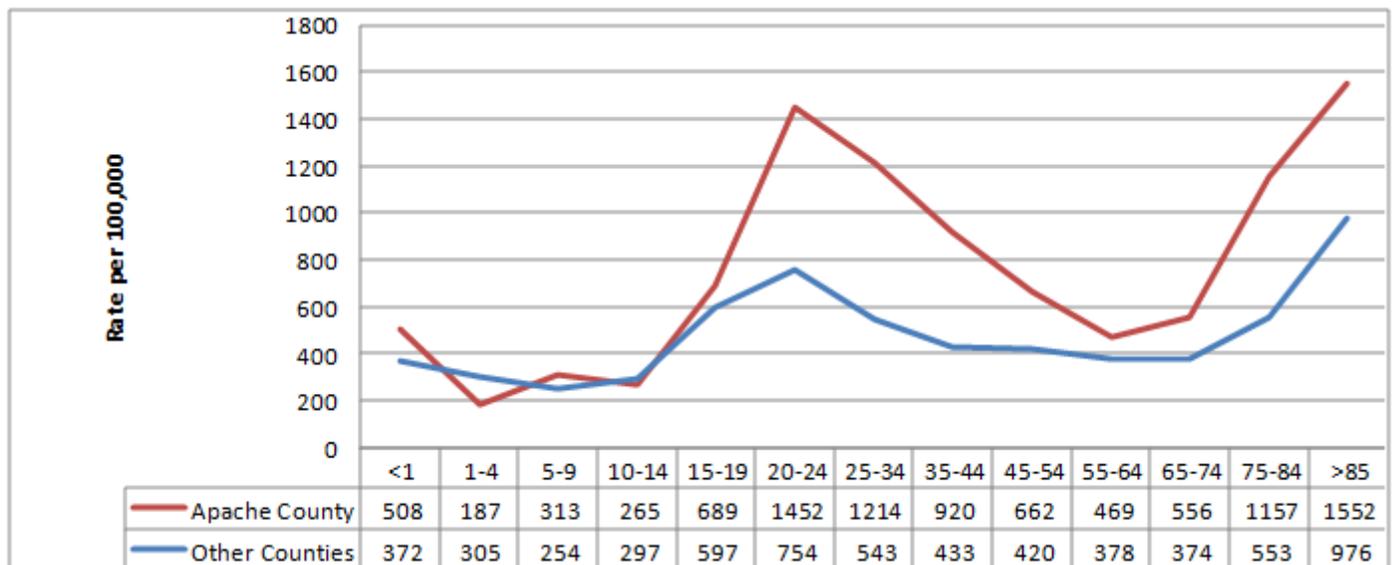

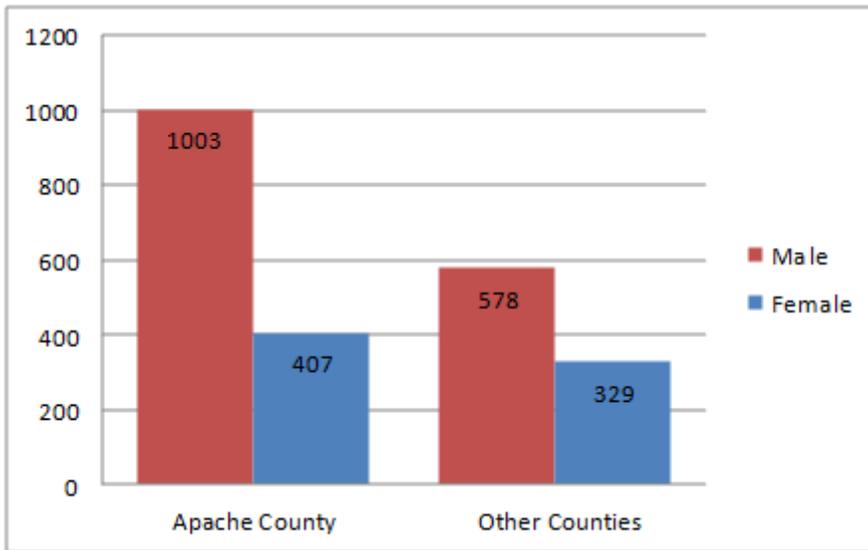

FIGURE 6: Trauma rate per 100,000 residents by gender

Males in Apache County have nearly two times the rate of trauma than their counterparts in other counties (Figure 6).

Due to the low trauma frequencies in non-Native American race/ethnicities, those categories have been combined for analysis.

Non-Native Americans in Apache County have a higher trauma rate than in other counties (Figure 7).

FIGURE 7: Trauma rate per 100,000 residents by race/ethnicity

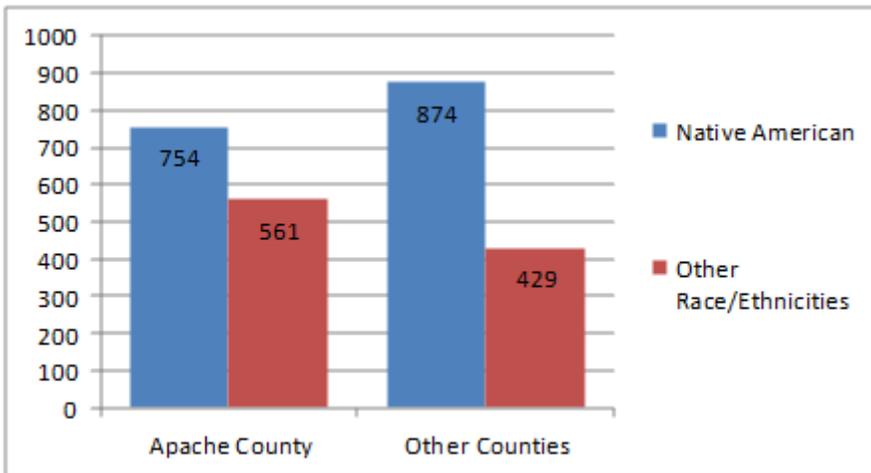

Figure 9 shows the top causes of traumatic injury in Apache County, as compared with other counties (rates per 100,000).

FIGURE 8: Frequency of top causes of trauma in Apache County

Cause	Count	Percent
Motor Vehicle Traffic	161	31.8%
Falls	103	20.3%
Struck by/Against	80	15.8%
Transport, other	48	9.5%
Cut/Pierce	24	4.7%
Other Trauma	91	17.9%
Total	507	100%

FIGURE 9: Top causes of trauma, rates per 100,000 residents

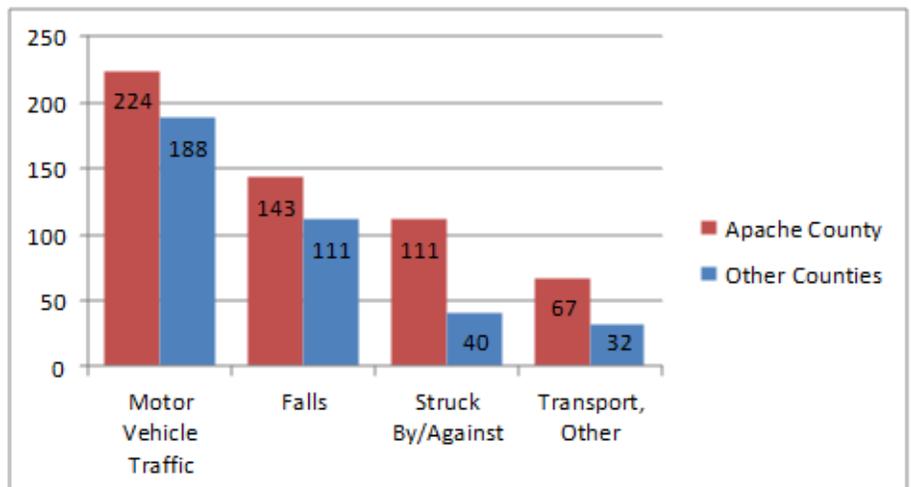

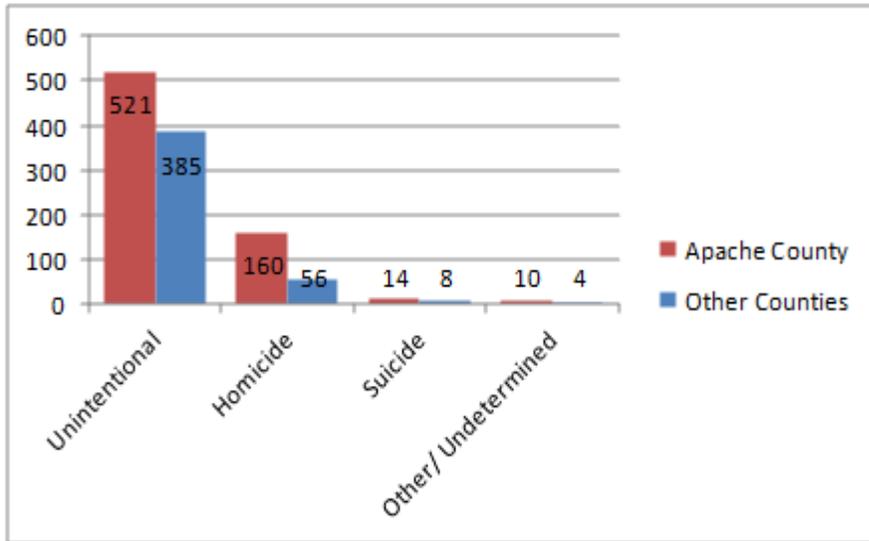

FIGURE 10: Intention of trauma, rate per 100,000 residents

The rates of unintentional and homicidal intent trauma in Apache County are higher than in other Arizona counties (Figure 10).

Documented alcohol and drug use was present in 24.9% and 8.7% of traumatic injuries in Apache County, respectively (Figure 11).

Due to the large amount of missing data on drug and alcohol use, results on the proportion of traumatic injuries involving substance use are not conclusive.

FIGURE 11: Substance use in traumatic injuries in Apache County

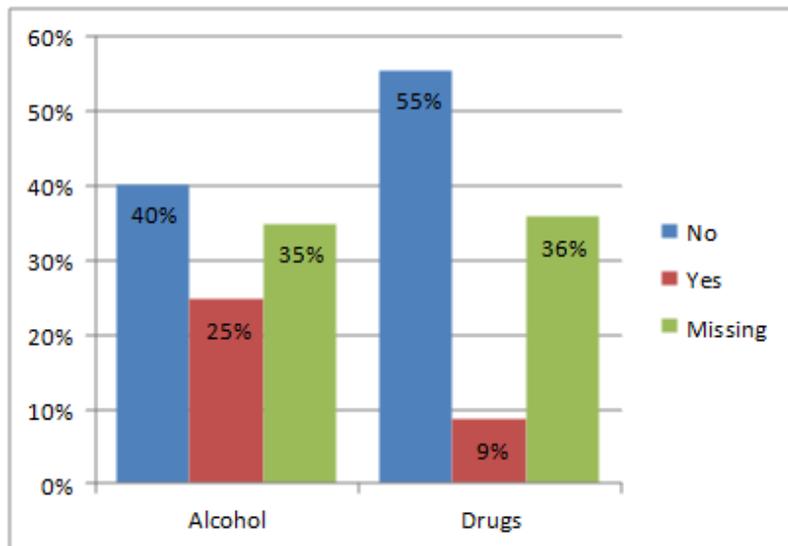

FIGURE 12: Frequency of substance use in traumatic injuries in Apache County

Substance Use		Frequency	Percent
Alcohol	No	204	40.2%
	Yes	126	24.9%
	Missing	177	34.9%
	Total	507	100%

	Air	Ground	Other	Missing
Apache County	280	146	79	2
Other Counties	4,293	20,697	3,738	113

FIGURE 15: Golden hour by transport type

The term “golden hour” refers to the hour immediately following traumatic injury. Theoretically, the chance of survival is highest when medical treatment to prevent irreversible internal damage is obtained within this time period.

Due to the large amount of missing data on golden hour, results on the proportion of patients arriving at the hospital within 1 hour are not conclusive.

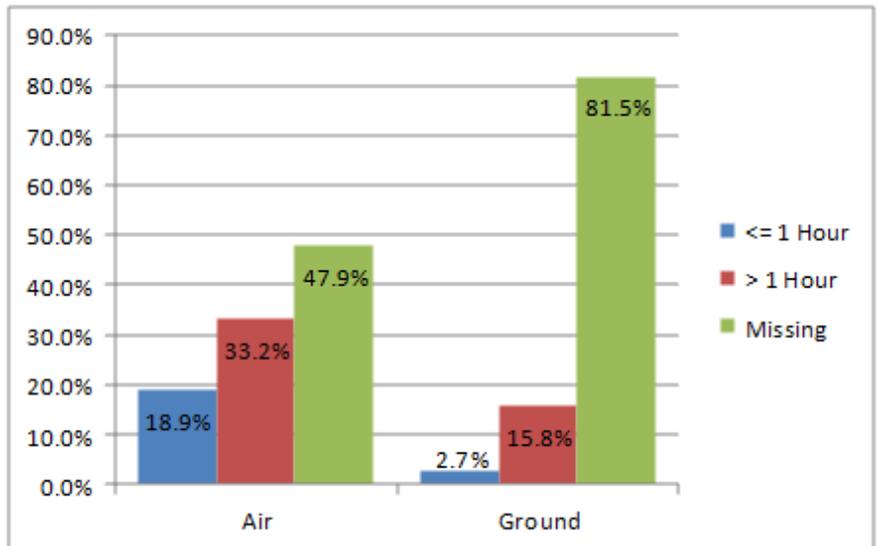

FIGURE 16: Count of golden hour by transport type to trauma center

Golden Hour	Air Ambulance		Ground Ambulance		Total	
	Count	Percent	Count	Percent	Count	Percent
<= 1 Hour	53	18.9%	4	2.7%	57	13.4%
> 1 Hour	93	33.2%	23	15.8%	116	27.2%
Missing	134	47.9%	119	81.5%	253	59.4%
Total	280	100%	146	100%	426	100%

FIGURE 17: Primary payer in Apache County

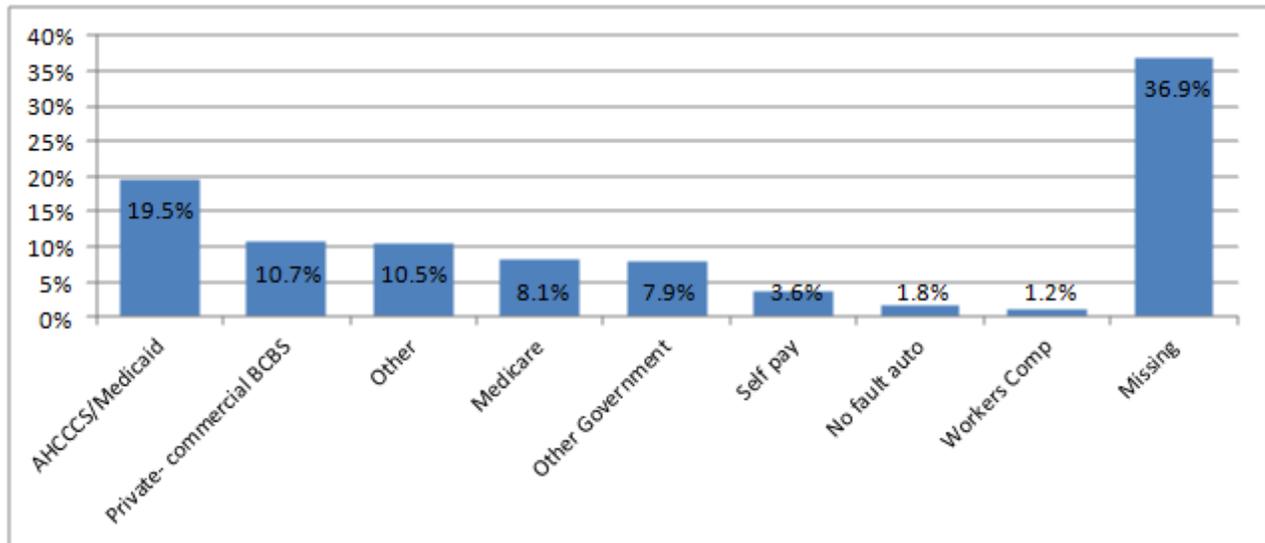

FIGURE 18: Count of primary payer in Apache County

Primary Payer	Frequency	Percent
AHCCCS/Medicaid	99	30.9
Private-commercial/BCBS	54	16.9
Other	53	16.6
Medicare	41	12.8
Other Government	40	12.5
Self pay	18	5.6
No fault auto	9	2.8
Workers Comp	6	1.9

AHCCCS/Medicaid is the primary payment source for trauma-related hospital visits in Apache County (Figures 17 & 18).

The median charge in Apache County in 2011 was \$28,294 (Figure 19).

FIGURE 19: Charges & reimbursement by primary payer in Apache County

Primary Payer	Total Charges	Median Charges	Total Reimbursement
AHCCCS/Medicaid	\$6,891,869	\$33,597	\$1,051,321
Private-commercial/BCBS	\$2,857,694	\$22,767	\$938,199
