BUREAU OF EMERGENCY MEDICAL SERVICES AND TRAUMA SYSTEM**

**COUNTY TRAUMA REPORTS:  
MOHAVE COUNTY  
ASTR 2012**

**Prepared by:  
Maureen Brophy, MPH  
Vatsal Chikani, MPH  
Rogelio Martinez, MPH**

**Data and Quality Assurance**

**Purpose:**

The purpose of this report is to describe the incidence of trauma in your county using the Arizona State Trauma Registry (ASTR). This information can develop and strengthen injury prevention programs at the county level.

**Methods:**

In 2012, the Arizona State Trauma Registry (ASTR) received data from 31 state-designated trauma centers. Three additional healthcare institutions participated in the registry but were not designated. The Arizona trauma system had eight Level I trauma centers - six were located in the central county of Maricopa with 60 percent of the state's population; the remaining two Level I trauma centers were located in the northern-most county of Coconino and the southern county of Pima. For the 2012 reporting year, there were twenty designated Level IV and three Level III trauma centers dispersed primarily in the rural areas of the state. There are a total of 32,602 records in the ASTR for 2012.

**Limitations:**

Data is limited to participating hospitals in the state. Information on patients that were treated at out of state and non-participating hospitals will be missed. Injuries included in this registry are those which fit the ASTR inclusion criteria (Appendix 1). As such, injuries reported are reflective of severe injuries, and may not be a complete picture of injury in your county.

**Geo-Population:**

Arizona is 400 miles long and 310 miles wide for a total area of 114,006 square miles. The topography of the state is 364 square miles of water and a blend of deserts, mountains, and plateaus. Arizona shares contiguous borders with the states of California, Colorado, Nevada, New Mexico, and Utah. Internationally, the Mexican states of Sonora, Chihuahua, and Baja California Norte share a border with Arizona.

The total reported population in 2012 was 6,498,570; this was up from the 2011 reported number of 6,438,178 residents.<sup>1</sup> In 2012, 84.2 percent of the population lived in urban counties (Maricopa, Pima, Pinal, and Yuma). The remaining counties (Apache, Cochise, Coconino, Gila, Graham, Greenlee, La Paz, Mohave, Navajo, Santa Cruz, and Yavapai) were home to 15.8 percent of the population.

Additionally, Arizona has within its borders twenty-two (22) federally recognized American Indian tribes, comprising a 2012 collective population of 305,029.

<i>Missing = 803</i>					

Statewide, there were 32,602 traumatic injuries seen at state designated trauma centers– a rate of 502 per 100,000 Arizona residents.

Mohave County makes up about three percent of the total population of Arizona. Injuries occurring in the county make up about three percent of the trauma cases from state designated trauma centers. The county-specific trauma rate, 478 per 100,000 county residents, is lower than the state average (Figure 3).

**FIGURE 3: County-specific trauma rates per 100,000 residents**

**FIGURE 4: Frequency and rate of trauma by age, race/ethnicity, and gender in Mohave County**

Group	Count	Percent	Rate per 100,000

	Asian or Pacific Islander	11	1.1%	453
<b>Total</b>	<b>970</b>	<b>100.0%</b>	<b>478</b>	

The trauma rate is comparable in Mohave County for age groups 10-74 (Figure 4), as compared to the rest of the state. The highest trauma rate is among the <1 age group (1,051 traumatic injuries per 100,000 county residents).

**FIGURE 5: Trauma rate per 100,000 residents by age**

**FIGURE 6: Trauma rate per 100,000 residents by gender**

Both males and females in Mohave County have lower trauma rates than their counterparts in other counties (Figure 6).

**FIGURE 7: Trauma rate per 100,000 residents by race/ethnicity**

The trauma rate for White/non-Hispanic, and Asian/Pacific Islander and Black/African American race/ethnicities is higher in Mohave County than in other counties (Figure 7).

**FIGURE 8: Frequency of top causes of trauma in Mohave County**

Cause	Count	Percent
Motor Vehicle Traffic	508	52.4%
Falls	216	22.27%
Struck by/Against	66	6.80%
Transport, other	90	9.28%
Cut/Pierce	20	2.06%
Firearm	17	1.75%

Figure 9 shows the top causes of traumatic injury in Mohave County, as compared with other counties (rates per 100,000).

**FIGURE 9: Top causes of trauma, rates per 100,000 residents**

**FIGURE 10: Intention of trauma, rate per 100,000 residents**

The rate of unintentional trauma is higher in Mohave County than in other Arizona counties (Figure 10).

Documented alcohol and drug use was present in 12.4% and 6.6% of traumatic injuries in Mohave County, respectively (Figure 11).

Alcohol and drug use is defined as any indication of use through testing or self-report, regardless of level of impairment.

**FIGURE 11: Substance use in traumatic injuries in Mohave County**

Other Counties	4,593	22,203	4,728	108

**FIGURE 15: Golden hour by transport type**

The term “golden hour” refers to the hour immediately following traumatic injury. Theoretically, the chance of survival is highest when medical treatment to prevent irreversible internal damage is obtained within this time period.

Due to the large amount of missing data on golden hour, results on the proportion of patients arriving at the hospital within one hour are not conclusive.

**FIGURE 16: Count of golden hour by transport type to trauma center**

Golden Hour	Air Ambulance		Ground Ambulance		Total	
	Count	Percent	Count	Percent	Count	Percent
<= 1 Hour	14	18.2%	100	66.7%	114	50.2%
> 1 Hour	2	2.6%	0	0.0%	2	0.9%
