

2014 National Immunization Survey Update

- The [National Immunization Survey \(NIS\)](#) is sponsored by the National Center for Immunizations and Respiratory Diseases and is conducted with the National Center for Health and Statistics, Center for Disease Control and Prevention (CDC). The NIS is a list-assisted random-digit-dialing telephone survey followed by a mailed survey to children’s immunization providers that began data collection in April 1994 to monitor childhood immunization coverage.
- Below depicts the population represented in the 2013 National Immunization Survey. There were approximately 123,594 children, 19-35 months of age in Arizona- of that, 441 received telephonic interviews. Of that 441, only 251 had adequate provider data (APD) to be included in the survey results.

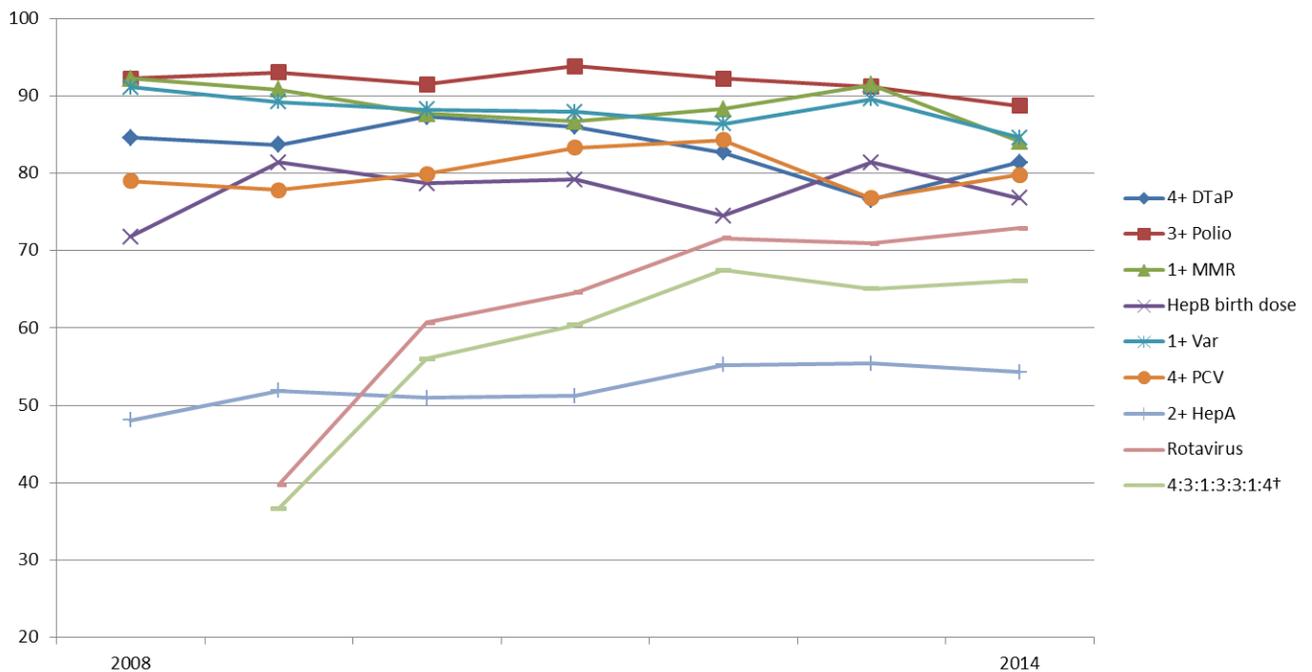

- Immunization coverage levels for teens 13-17 years of age are assessed for 1Tdap, 1MenACWY, 1 HPV, and 3 HPV and 2 Varicella. 20,827 adolescents were assessed **nationally**.
- In Arizona there were no statistically significant changes in coverage for HPV, Tdap, or MenACWY in teens. Arizona does have higher coverage for MenACWY compared to the national average.
- Arizona has reached Healthy People 2020 goals of 80% coverage for Tdap and MenACWY but have not reached the 90% coverage goal for 2 Varicella or 80% coverage for 3 HPV for males and females

No statistically significant changes in HPV vaccination coverage between 2013 & 2014

- Immunization coverage levels for toddlers 19-35 months of age are assessed for 4 DTaP, 3 Polio, 1 MMR, Hib, 3 Hep B, Hep B birth dose, 4 PCV, 2 Hep A, Rotavirus, and the 4:3:1:3:3:1:4 series.
- There were no statistically significant changes between 2013 and 2014 survey results

Arizona NIS Data 19-35 months of age

- In Arizona, we have not reached our Health People 2020 goals for any of the recommended toddler vaccinations.
