

Arizona Department of Health Services
Well Woman HealthCheck Program
Screening Data, 2000 - 2013

Report Summary

This report contains data and figures extracted from Arizona's Well Woman HealthCheck Program (WWHP) database between July 1st, 2000 and June 30th, 2013. Summary counts were generated using SAS software and graphs were created using Microsoft Excel. In the following document, summary counts are displayed by county and program fiscal year.

Methodology: Queries were performed on CDC's CaST database to identify patients in each fiscal year who have received either breast cancer screening or cervical cancer screening. The results of the query were extracted and imported into SAS for analysis. Data cleaning programming techniques were used to identify female patients screened in the WWHP for each fiscal year (July 1st – June 30th).

Summary statistics for the past 13 years can be seen in **Table 1** and are displayed based on their geographic location(s). **Figures 1 – 14** display screening data trends for each county.

Please refer questions to the HealthCheck Programs Data Manager at (602) 542-2905.
