This three-day infectious disease exercise and training shall introduce participants to a variety of topics in infectious disease including: vaccine preventable diseases; healthcare associated infections; tuberculosis and sexually transmitted diseases; vector-borne and zoonotic diseases; food-borne diseases; water-borne diseases; informatics; preparedness; tribal investigations; and information on outbreaks and investigations. Participants shall obtain the most current infectious disease information and had the opportunity to network with a variety of partners including state and local health, infection control practitioners, public and community health nurses, health educators, epidemiologists, sanitarians, correctional facility representatives, animal control agencies, preparedness coordinators, laboratorians, border health counterparts, and university faculty and students. Sessions will be led by experts in the field of infectious disease with an emphasis on current trends. Participants are encouraged to forge connections with partners and exchange information and knowledge of current infectious disease topics.
