26,549 Arizona children under age 3 were hospitalized or seen in an emergency department for a non-fatal injury in 2007.

Falls caused the greatest number of non-fatal injuries.

99.4% of all non-fatal injuries were unintentional.

Falls, cut/pierce, poison, and overexertion injuries were the most common types of non-fatal injuries among Arizona children in 2007.

The longest hospital stay for a non-fatal injury was 105 days.

Each inpatient hospitalization lasted for an average of 3.3 days.

On average, each non-fatal inpatient hospitalization cost $26,174.

Total hospital charges for all non-fatal inpatient hospitalizations or emergency department visits was $45.4 million.

Prevent childhood injuries!

- Supervision is key
- Wear a helmet that fits correctly for skating, biking or other wheeled sports
- Childproof your home
- Buy age appropriate toys
- Seatbelts, booster seats and car seats are a must when riding in a car.
