

Help fight COVID-19 and keep your family safe with the COVID-19 vaccine.

To stop COVID-19, we need to use all the tools we have available. Vaccines are one of the most effective tools to protect your health and prevent disease from spreading. The COVID-19 vaccine is available to children and teens **ages 5 and older**.

Help fight the pandemic and get your vaccine today!

COVID-19 vaccines are **safe, effective, & free**. It is important that all family members 5 years and older get the vaccine to prevent serious illness, hospitalization and even death.

Other vaccines, like the flu shot or other vaccinations can be given **at the same time** as your COVID-19 vaccine.

What Parents Should Know

- The Pfizer-BioNTech vaccine is the only vaccine currently available for ages **5 years and older**.
- Your child will need a second shot of the Pfizer COVID-19 vaccine 3 weeks after their first shot.
- COVID-19 vaccines can be received with other vaccines at the same childhood wellness visit, without having to wait between vaccines.
- Your child may have some side effects (fever, body aches, sore arm) which are normal signs that their body is building protection.
- Talk to your child about what they can expect at their vaccine appointment, and remind them that vaccines keep them and others healthy.
