Doctoral Psychology Internship Program

Brochure

Phoenix, Arizona

2017-2018
Arizona State Hospital recognizes that the internship is an essential component of doctoral training programs of professional psychology and strictly follows the American Psychological Association’s Guidelines and Principles for Accreditation. Arizona State Hospital has been training psychology students since the late 1960s. The Doctoral Psychology Internship Program has been APA accredited as an independent training site since 2001. The internship is currently affiliated with Argosy University—Phoenix and Midwestern University—Phoenix, and as such accepts applications only from students in either of those programs.

Arizona State Hospital is a comprehensive psychiatric hospital that provides mental health services to both acutely and chronically disturbed patients of all ethnic backgrounds. It is the only state hospital in Arizona. The two main treatment programs of the hospital are the General Adult (Civil) Program and the Forensic Program. Patients receive treatment from staff of various disciplines; this staff includes psychiatrists, psychologists, medical specialists, social workers, recreation therapists, professional counselors, licensed nurses, paraprofessional nursing personnel, auxiliary clinic personnel, and educators. Also located on hospital grounds is the Arizona Community Protection and Treatment Center, a treatment program for sexual offenders.

Arizona State Hospital currently has ten doctoral level psychology staff, four practicum-level graduate students (3rd – 4th year), and four Master’s level therapists in addition to the doctoral interns. Interns are supervised directly by a primary supervisor and other psychologists working with them, and they will receive experiences in the following areas: psychological assessment and diagnosis, psychotherapy (individual and group), case consultation, and educational services to staff.

**INTERNSHIP PROGRAM DESCRIPTION**

**A. Training Program Mission Statement:** The mission of the Arizona State Hospital Doctoral Psychology Internship Program is to prepare students for the practice of professional psychology by providing high quality professional supervision and training experiences with diverse client populations within the area of public service psychology. Opportunities exist for specialized training in certain areas, such as forensics, neuropsychology, and evaluation and treatment of sexual offenders.

**B. Philosophy:** Our guiding philosophy is to provide interns with evidence-based knowledge and techniques in order to train them to function as psychologists in varied settings. A major effort will be made to tailor the internship to the individual intern’s needs and to allow a reasonable amount of specialization within a generalist framework. The generalist approach means that the intern will receive training in a breadth of assessment and therapy skills, with exposure to a wide range of diagnoses and diverse patient backgrounds. Our goal is to ensure that interns gain therapy and assessment skills that will enable them to function as professional psychologists in an array of settings upon completion of the internship.
C. Plan:

1. To offer a unique multicultural internship emphasizing diverse economic and ethnic groups within the area of public service psychology.

   The Arizona State Hospital Doctoral Psychology Internship Program offers services to diverse cultural populations. The hospital draws patients from the entire State of Arizona, representing all socioeconomic levels, including homeless, rural, and urban residents. The population includes African American, Native American, Asian American, Caucasian, and Hispanic patients, many originating from Mexico and South America. Both male and female patients are in residence. Patients are diverse in age, religion, sexual orientation, and spiritual and cultural traditions.

   In addition, the internship offers education and training designed to help interns learn about multicultural issues inherent in working with our diverse population. Education and training on various aspects of multicultural work is ongoing and addressed routinely in supervision sessions.

2. To offer a high level of professional supervision which will facilitate the intern’s professional growth.

   The Arizona State Hospital’s Psychology Service has highly competent, licensed, professional supervisors who volunteer to work with psychology interns; offering supervision to interns is a choice made by individual psychologists in each treatment area. The philosophy of supervision is a mentoring approach.

   Each intern meets weekly with his or her primary supervisor for at least two hours of scheduled individual supervision, and group supervision is provided for one hour weekly. There is at least one more hour of scheduled supervision provided weekly; this supervision occurs with either a secondary supervisor, a supervisor of a minor rotation, or in a group supervision format. There is additional time for supervision on a less formal basis. The supervisors are readily available for spontaneous questions and the intern’s need for guidance.

3. To offer a broad range of training experiences, including opportunities in the subspecialties of forensic psychology, sexual offender evaluation and treatment, and neuropsychology.

   Interns will have two six-month rotations chosen from among three offered. The three rotations include a general adult (civil) rotation, a forensic program rotation, and a forensic rotation focusing specifically on sexual offender evaluation and treatment. In addition to the major rotations, interns have the option of choosing minor rotations in any of these areas and/or in neuropsychology. Other training opportunities may include doing forensic evaluations in the hospital’s Restoration to Competency program, co-facilitating dual-diagnosis therapy groups, and developing behavioral support plans. All rotations and other training opportunities are offered contingent on supervisor availability. Interns will be able to attend seminars and workshops presented in the community. Didactic seminars will be hosted by the internship on a weekly basis.
4. To improve intern competency in a broad array of assessment and treatment procedures.
Training in assessment and psychotherapeutic interventions is offered within each major rotation. The focus of assessment is derived from the patient populations. Multiple theoretical models are considered. Assessments may include intellectual, neuropsychological, forensic competency, risk assessment, academic achievement, or personality evaluations. These encompass formal assessment techniques, records review, structured/unstructured interviews, and behavioral observations. The intern is taught to administer, score, and interpret the objective and projective measures and to integrate the results with clinical interviews, behavioral observations, and treatment response. Through consistent and careful supervision, the intern is exposed to a variety of instruments and is guided in their selection.

The focus of training in psychotherapeutic interventions is derived from the patient’s individualized needs. Within this framework, interns are exposed to a variety of treatment approaches such as cognitive-behavioral, psychodynamic, psychosocial rehabilitation, family systems approaches, and process-oriented group psychotherapy. All interns receive experience with individual and group psychotherapy, carrying a minimum of two individual therapy cases and one therapy group throughout the training year.

5. To provide the intern experience working within a multidisciplinary treatment setting.
Arizona State Hospital emphasizes a multidisciplinary approach to treatment, and psychologists work as consultants to the treatment teams. Interns will work closely with the multidisciplinary treatment teams, which include the disciplines of Psychiatry, Social Work, Medicine, Nursing, Rehabilitation, and Education. The multidisciplinary teams are responsible for developing and revising the patient’s treatment plan, and input from psychologists and interns is a valued part of the treatment planning process.

6. To increase the intern’s knowledge of legal, ethical, and professional issues within the practice of psychology.
Legal, ethical, and professional issues that arise in clinical work are routinely addressed in individual and group supervision. In addition, these topics are incorporated into the weekly clinical seminars.

D. **Goals:** By the end of the internship year we expect that interns will demonstrate competency in the following areas:

1. Assessment Skills
2. Intervention Skills
3. Communication Skills
4. Interpersonal Relationships
5. Professional Judgment
6. Ethical and Legal Issues
7. Receptivity to Feedback
8. Development of Professional Identity
9. Recognition of Own Strengths and Limitations

E. General Requirements: This is a full-time internship program for 12 months. Internship will begin the day after Labor Day and be completed the Friday before the following Labor Day. A minimum number of 1900 hours is required to complete the internship. If additional hours are needed for a specific purpose (e.g., to meet requirements for 2000 hours), the intern may request approval from the Training Committee to work additional hours.

ROTATIONS AND SPECIALTY AREAS
All interns will have the opportunity to receive experience and training in the general adult (civil) program, in the forensic program, and in the sexual offender treatment program. Each rotation will be for a period of six months. There are also possibilities of minor rotations in specialty areas. All rotations are based on availability and may be closed at certain times for a variety of reasons. This may occur under the following conditions: a supervisor has a prolonged absence, significant administrative reorganization occurring on a rotation, or the psychologist position is vacant. Throughout the training year interns will provide psychotherapy, carrying at least two individual therapy cases and co-facilitating at least one therapy group. Therapy experiences will occur in all areas of the hospital and not just in the area of the intern’s current major rotation.

A. Forensic Program: The Arizona State Hospital is a center for forensic services for the State of Arizona. The forensic rotation includes work in the forensic hospital and the sexual offender treatment program. During this rotation interns will have the opportunity to receive training in assessment and therapy. Interns will have the opportunity to complete integrated comprehensive psychological evaluations and risk assessments. Risk assessments, in which the patient’s risk of re-offending is evaluated, are conducted with patients seeking increased levels of hospital privileges and conditional release into the community. Interns also have the opportunity to provide consultation to treatment teams and interdisciplinary staff regarding patient care.

B. General Adult Program: The General Adult (Civil) Program serves patients with serious mental illness whose treatment needs cannot be met by community facilities. The program is housed in the Civil Hospital, a modern facility with all buildings around a central mall area. Patients leave their units for many treatment activities, as well as recreation and visits to the patient library, café, thrift shop, swimming pool, and other locations on the mall. The philosophy of the program is based on a Recovery Model, with the goal of helping patients prepare to return to community living. During this rotation, interns will perform psychological evaluations and individual psychotherapy, and provide consultation services and participate as a member of the interdisciplinary treatment team.
C. Sexual Offender Treatment Program: Psychologists are affiliated with the Arizona Community Protection and Treatment Center (ACPTC), the sexual offender treatment program located on hospital grounds. Interns may opt to gain increased experience in evaluation and treatment of sexual offenders through participation in this rotation. Interns may participate in individual and group sexual offender treatment and conduct evaluations for conditional release and annual review evaluations. Interns become exposed to the statutes affiliated with sex offender status, registration, treatment, and the legalities behind civil commitment for sexually violent persons (SVP).

D. Minor Rotations/Training Opportunities: Interns may also receive training experiences through minor rotations in the above areas and in the area of neuropsychology. Details of the minor rotation, such as amount of time devoted to the rotation, need to be approved by the Intern Training Committee.

Neuropsychology: Neuropsychological assessment services are provided on all units to patients with possible or documented cognitive impairment, such as traumatic brain injury, cerebrovascular accident, and various forms of dementia. Interns can gain experience in comprehensive neuropsychological assessment with a broad repertoire of instruments. Detection of malingering of cognitive deficits and prescription of cognitive rehabilitative strategies are of particular interest for this hospital population.

Training Opportunities: Along with minor rotations, there may be opportunities for interns to participate: 1) in co-facilitating dual-diagnosis [mental illness and substance abuse] therapy groups; 2) in doing forensic evaluations in the hospital’s Restoration to Competency program, and 3) in developing behavioral support plans for civil and forensic patients. As with all rotations, these training opportunities are contingent upon supervisor availability.

STIPEND AND BENEFIT INFORMATION
There are three available intern positions for training year 2018-2019. Interns are funded by Argosy University—Phoenix and Midwestern University—Phoenix; the stipend for the year is $20,000. This stipend does not include health insurance benefits. There is no paid sick leave or vacation leave, but flexibility is offered regarding making up hours when an intern takes leave time. Interns may request up to two weeks of unpaid leave during the training year. There is a limitation of one week of terminal vacation leave at the end of the internship year.

APPLICATION PROCEDURE
Students from Argosy University—Phoenix and Midwestern University—Phoenix are encouraged to apply. While it is not necessary to have experience working in a state hospital, experience at some of the following settings is beneficial: community mental health centers, forensic or correctional placements (e.g., jails/prisons, state hospitals), inpatient hospitals, and outpatient medical/psychiatric settings. Since assessment is an integral part of the internship experience, it is helpful if applicants have had previous training and experience with different psychological tests, including the WAIS-IV, MMPI-2, MCMI-III, and PAI. Strong integrative report writing skills are preferable. There is a minimum requirement of 300 Intervention and
Assessment hours on the AAPI, and a total of 1000 hours including Assessment and Intervention, Support Activities, and Supervision hours. Interns are required to pass a security clearance and be fingerprinted. Interns must meet eligibility requirements for work-study funds as this is the source of their stipend.

Arizona State Hospital will follow all APPIC policies for participation in the APPIC Match. This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept, or use any ranking-related information from any intern applicant. The only information this program will communicate to applicants prior to the release of the APPIC Match results is whether or not the applicant remains under consideration for admission.

Applicants should use the standard online APPIC application form. Applications and supporting materials are due by November 15, 2017.

To apply, include the following materials:

1. Completed APPIC application
2. Curriculum Vita
3. Graduate transcript(s)
4. Three letters of recommendation

The Training Committee will review applications and invite selected applicants for either personal or telephone interviews. All applicants will be informed of their interview status by December 15, 2017. They will be notified by email that they are being offered an interview. Interviews will be held in January; at this time the applicants can meet the training staff and receive information about the internship and available rotations. Applicants who come to the interview will be interviewed individually by a member of the training staff and may participate in a small group interview. If an applicant cannot make any of the scheduled interview dates, a telephone interview can be arranged.

PSYCHOLOGY STAFF

KIMI COHEN, Ph.D.
Training Director
Oklahoma State University, 1997
Areas of Interest: Individual and group psychotherapy, Dialectical Behavior Therapy, clinical supervision, and forensic rehabilitation. Can be reached at kimberly.cohen@azdhs.gov

JAMES HOLMES, JR, Psy.D.
Arizona School of Professional Psychology/Argosy University, 2010
Areas of Interest: Psychological assessment, neuropsychological assessment, cognitive rehabilitation, forensic psychology and rehabilitation, Cognitive-Behavioral Therapy, and Client-Centered Therapy. Can be reached at james.holmes@azdhs.gov

SHERIDYN MILLER, Psy.D.
Midwestern University, Glendale, 2015
Areas of Interest: Psychological assessment, forensic psychology, individual and group psychotherapy, Cognitive-Behavioral Therapy, as well as psychosexual assessment and treatment. Can be reached at sheridyn.miller@azdhs.gov

ALICE PICKERING, Psy.D.
Midwestern University, Glendale, 2017
Areas of Interest: Group therapy, client-centered therapy, psychodynamic principles, forensic psychology, psychological and neuropsychological assessment. Can be reached at alice.pickering@azdhs.gov

KEITH REINHARDT, Psy.D., MT-BC
Arizona School of Professional Psychology/Argosy University, 2015
Areas of Interest: Individual and group psychotherapy, psychological assessment, health psychology, grief & loss, humanistic oriented therapy, person-centered therapy, and diversity. Can be reached at keith.reinhardt@azdhs.gov

SUMMER SCHNEIDER, Psy.D.
Arizona School of Professional Psychology/Argosy University, 2014
Areas of Interest: Psychological assessment, individual and group psychotherapy, criminal forensic psychology and rehabilitation, Psychodynamic/Gestalt/Humanistic oriented therapy, case conceptualization, consultation, and clinical supervision. Can be reached at summer.schneider@azdhs.gov

JOHN ST. CLAIR, Ph.D.
City University of New York, 1994
Areas of Interest: Neuropsychology and forensic psychology. Can be reached at John.StClair@azdhs.gov
GLENN TANITA, DMH (Doctor of Mental Health)
University of California, San Francisco 1985
Areas of interest: Individual/group therapy, Dialectical Behavior Therapy, clinical supervision, trauma treatment (EMDR), treatment of personality disorders, and psychosexual treatment. Can be reached at Glenn.Tanita@azdhs.gov.

LINDSAY WERKHEISER, Psy.D.
Nova Southeastern University, 2009
Areas of interest: Cognitive Remediation, Cognitive Behavioral Therapy, public health, individual and group psychotherapy and forensic psychology. Can be reached at lindsay.werkheiser@azdhs.gov.

SONYA G. WILLIS, Psy.D., M.Ed.
Arizona School of Professional Psychology/Argosy University Phoenix, Class of 2015
Areas of Interest: Individual/group therapy, Psychological assessments/evaluations, Acceptance and Commitment Therapy (ACT), Dialectical Behavior Therapy (DBT), Consultation/Supervision, Program Development, Research, Social Justice, and Culture/Diversity. Can be reached at sonya.willis@azdhs.gov.
PHOENIX, ARIZONA:
A Great Place to Train and Live

Metropolitan Phoenix, the sixth largest city in America with a population of more than two million, is located in the beautiful Valley of the Sun. The city is ringed by mountains and graced with palm trees and desert flora. Phoenix has striking architecture with Mexican, Spanish, and Native American influences. Frank Lloyd Wright and his students designed several local buildings, homes, and churches. Mr. Wright’s legacy continues at Taliesin West, the school he founded in Scottsdale. Phoenix’s principal industries are manufacturing of high technology products, agriculture, tourism, and travel. Many cultural events are presented by entities such as the Phoenix Symphony Orchestra, the Phoenix Chamber Music Society, the Scottsdale Center for the Arts, Ballet Arizona, and the Arizona Opera Theater Company.

Phoenix is a noted winter resort area. Mid-winter weather is usually warm, dry, and sunny -- which is perfect for golf, hiking, and tennis. Skiing is available three hours north near Flagstaff. Swimming and water skiing are popular during our hot spring and summer seasons. Phoenix offers over 300 days of sunshine; thus, many year-round sporting activities are prevalent. Near Phoenix there are six artificial lakes where boating, fishing, and water skiing can be enjoyed. Arizona has three or four ski resorts, depending on snowfall. Phoenix is home to five major league teams: NBA’s Suns, NFL’s Cardinals, MLB’s Arizona Diamondbacks, NHL’s Coyotes, and the WNBA’s Mercury.

Phoenix has much to offer fine arts lovers. The Heard Museum houses a renowned collection of American Indian art and culture. The Phoenix Art Museum has a fine permanent collection and mounts several shows each year. In addition, Phoenix has many excellent restaurants, a variety of shopping malls, and numerous nightspots.

Arizona State University has several campuses in the area with its main campus in Tempe, approximately 20 minutes from central Phoenix. The Phoenix area has a nationally recognized community college system. The area has some private colleges as well, such as Grand Canyon University, the Thunderbird School of International Management, Midwestern University, and Argosy University. In the area there are a number of internationally known medical facilities, including the Mayo Clinic and the Barrow Neurological Institute, and the University of Arizona has a medical school branch in downtown Phoenix.

Pine forests are a two-hour drive from the city. The Grand Canyon is a four-hour drive to the north. The beaches of Mexico are a four-hour drive to the south. Sky Harbor International Airport provides daily connections to all major international airports. Los Angeles and San Diego are an hour away by plane or five to six hours away by car. Public transportation in Phoenix consists of a number of bus routes and a high speed light rail line. Since the city is spread out, having a car is helpful. Suitable housing is plentiful, and the cost of living is moderate for a major city.
