

2019-2020 Influenza Season (9/29/2019 - 9/26/2020)

Please see the **interactive influenza dashboard** for more details on current and past seasons in Arizona.

Influenza & RSV synopsis

- Influenza activity is increasing. Arizona reported Regional Activity for week 46.
- To receive weekly updates, subscribe to the Flu & RSV report at <u>azhealth.gov/email</u>.
- The cases included in this report represent a small proportion of the true number of cases of influenza. Many people do not visit the doctor when ill and doctors should not be expected to run tests on all patients exhibiting influenza-like symptoms.

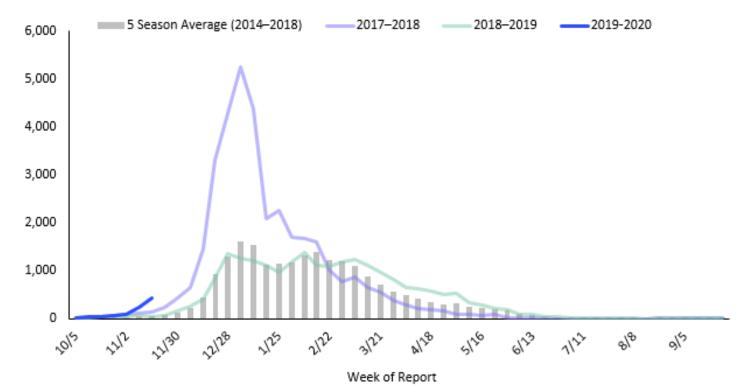

Arizona Influenza Activity Levels (see definitions at the end of this report)

Local No Activity Sporadic Widespread Regional 2019-2020 2018-2019 2017-2018 2016-2017 2015-2016 40 48 52 16 20 28 32 44 8 12 24 36 39 Δ Week of Report

Arizona reported Regional activity for week 46.

Laboratory-Confirmed Influenza Activity by Season

In the past week, there were **426** laboratory confirmed influenza cases.

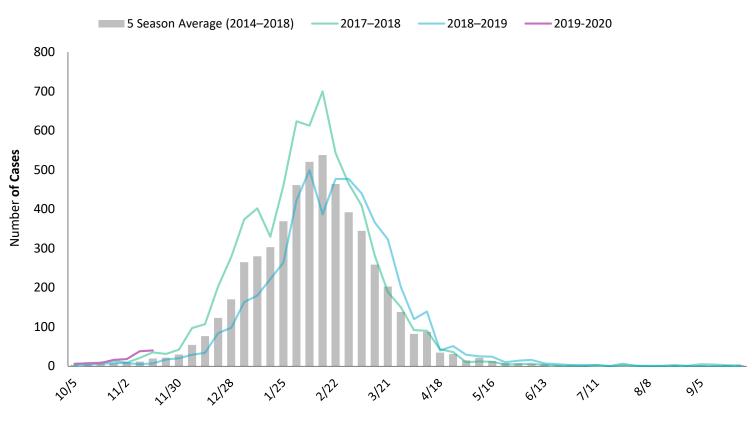

Number of Lab-Confirmed Influenza Cases Reported, by Week of Report: 2014–2020

Table 1: Reported Laboratory-Confirmed Influenza Cases Compared to Past Weeks and	
Seasons	

	Cumulative Season Total	Current Week Total
2019–2020	950	426
2018–2019	290	57
5 season average	209	52
% increase, compared to 2018–2019 season	228%	647%
% increase, compared to a typical influenza season	354%	716%
% increase, compared to last week	81%	80%

In the past week, there were 40 laboratory confirmed RSV cases.

Week of Report

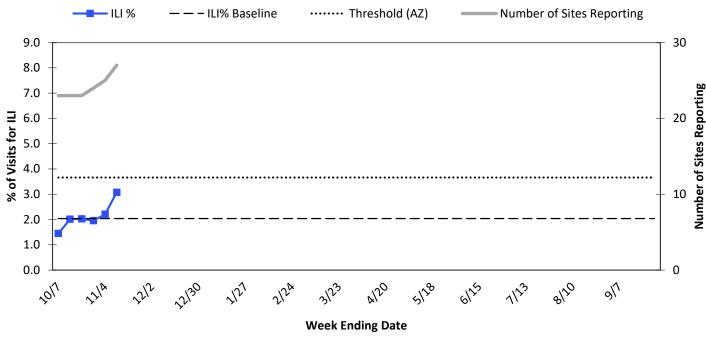

Number of Lab-Confirmed RSV Cases Reported, by Week of Report: 2014–2020

	Cumulative Season Total	Current Week Total
2019–2020	133	40
2018–2019	37	7
5 season average	56	18
% increase, compared to 2018–2019 season	259%	471%
% increase, compared to a typical season	138%	122%

Table 2: Reported Laboratory-Confirmed RSV Cases Compared to Past Weeks and Seasons

Influenza-Like Illness (ILI) Surveillance from Sentinel Outpatient Providers

ILI percent was below threshold at 3.1% in week 45.

Percentage of Visits for ILI at Sentinel Providers, 2019-2020, Arizona

*Note: The baseline is defined as the mean of the state ILI% in weeks in the 2015–2018 influenza seasons in which two or more consecutive weeks each accounted for less than 2% of the season's total number of specimens testing positive for influenza at the Arizona State Public Health Laboratory. The epidemic threshold is defined as the mean plus two standard deviations.

About the Data:

<u>2019–2020 Influenza Season</u>: The season is defined by surveillance weeks. The first day of the 2019–2020 influenza season was September 29, 2019, or week 40 and the 2019–2020 surveillance season will continue through September 26, 2020, or week 39.

<u>Activity Levels</u>: Indicator of the geographic spread of influenza activity, reported to CDC by all states each week. Widespread: Increased influenza-like illness from sentinel providers (ILI) in three or more regions and large numbers of laboratory-confirmed influenza cases in those regions.

Regional: Increased ILI in two regions and elevated numbers of laboratory-confirmed influenza cases in those regions.

Local: Increased ILI in one region and elevated numbers of laboratory-confirmed influenza cases in that region. *Sporadic*: No increase in ILI activity and only isolated laboratory-confirmed influenza cases. *No Activity:* No increase in ILI activity and no laboratory-confirmed influenza cases.

<u>Influenza-associated Pediatric Deaths</u>: Influenza-associated pediatric deaths are reportable to the public health departments in Arizona. The 2008–2009 and 2009–2010 seasons showed an increase in influenza-associated deaths in children related to the circulation of the 2009 H1N1 strain. One to five deaths were reported in each of the other seasons since 2004.

<u>Influenza-like illness</u>: Defined as a fever of at least 100°F plus either a cough or a sore throat. In weeks when a relatively low number of enrolled facilities report data, the ILI proportion may not be as representative of Arizona activity as for other weeks. The state ILI baseline is 2.0% and the epidemic threshold is 3.7%*.
