

2021-2022 PEDIATRIC INFLUENZA VACCINES

✱ Indicates presentations available to order for the Vaccines for Children (VFC) program.

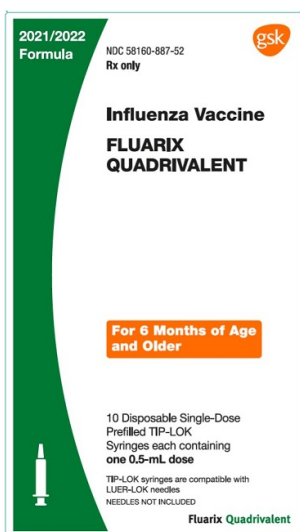

6 Months & Older

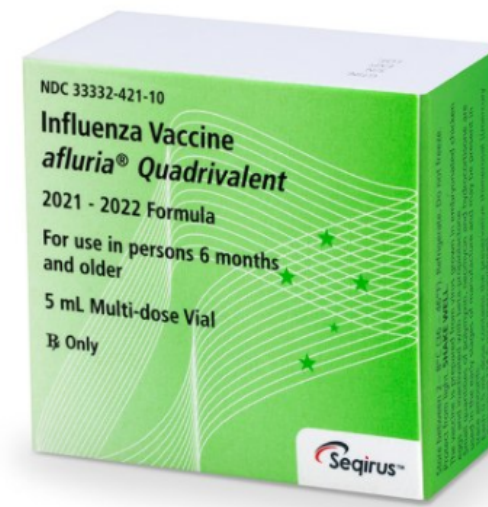

Flucelvax® Quadrivalent ✱
Seqirus USA, Inc
0.5 mL single-dose syringe, 10 pack
NDC 70461-0321-03

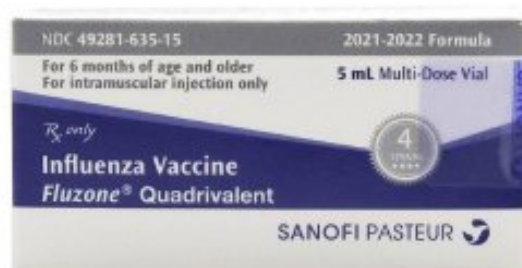

Flucelvax® Quadrivalent
Seqirus USA, Inc
5 mL multi-dose vial, 10 doses
NDC 70461-0421-10

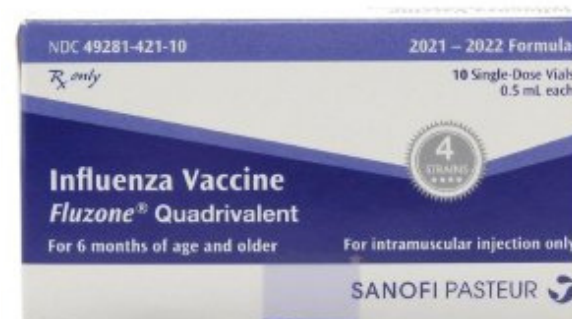

Fluarix® Quadrivalent ✱
GlaxoSmithKline Biologicals
0.5 mL single-dose syringe, 10 pack
NDC 58160-0887-52

Afluria® Quadrivalent
Seqirus USA, Inc
5 mL multi-dose vial
NDC 33332-0421-10

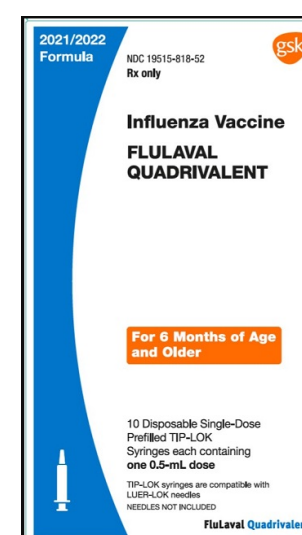

Fluzone® Quadrivalent
Sanofi
5 mL multi-dose vial, 10 doses
NDC 49281-0635-15

Fluzone® Quadrivalent ✱
Sanofi
0.5 mL single-dose vial, 10 pack
NDC 49281-0421-10

Fluzone® Quadrivalent ✱
Sanofi
0.5 mL single-dose syringe, 10 pack
NDC 49281-0421-50

FluLaval® Quadrivalent ✱
GlaxoSmithKline
0.5 mL single-dose syringe, 10 pack
NDC 19515-0818-52

For 8-year-olds who need two doses of influenza vaccine this season, and they receive the first dose but turn 9-years-old before the second dose, still give them the second dose.

Guide for Determining the Number of Doses of Influenza Vaccine to Give to Children Age 6 Months Through 8 Years

*The two doses need not have been received during the same season or consecutive seasons.

Coadministration of COVID-19 and Influenza Vaccines

Providers can administer COVID-19 and influenza vaccines on the same day or coadminister at any time interval. There may be logistical advantages to administering COVID-19 and influenza vaccines on the same day, which providers may encourage to patients. There are no safety concerns for coadministration.

When deciding whether to coadminister another vaccine(s) with COVID-19 vaccine, consider:

- If the patient is behind OR if the patient is at risk of becoming behind on recommended vaccines
- The patient's risk of vaccine-preventable disease
- The reactogenicity profile of the vaccines
- The likelihood of avoiding a missed opportunity to vaccinate

Best practices for multiple injections include:

- Label each syringe with the name and the dosage (amount) of the vaccine, lot number, the initials of the preparer, and the exact beyond-use time, if applicable
- Separate injection sites by 1 inch or more, if possible
- Administer the COVID-19 vaccines and vaccines that may be more likely to cause a local reaction (i.e., tetanus containing vaccines) in different limbs, if possible
