

The Status Bar

Record Validation serves to apply a status to the record. The record status is used to track the progress of the record within the registration process. The status applied to the record is also used to place records in Registration Work Queues enabling users to keep track of the records they are working on.

While working within a Death or Fetal Death registration the Record Status can be viewed within the Status Bar, located under the identifying information, at the top of the page.

Death Registration Menu	3264333 :Death Example AUG-10-2023
Personal Information	/New Event/Not Registered/Unsigned/Uncertified/NA/New Event

A Death or Fetal Death record begins with the status of *New Event*. As the record progresses through the registration process the Record Status will update accordingly.

If any errors were discovered with in the personal or medical information pages when Validating, the New Event status will update to *Personal Invalid* or *Medical Invalid*.

/Personal Invalid/Medical Invalid	Not Registered/Unsigned/Uncertified/NA	Personal Pending/Medical Pending	FIPS Coding Required
-----------------------------------	--	----------------------------------	----------------------

The Invalid Status applies a filter of *Personal Pending* and/or *Medical Pending* to the record. This means the user can now find the record in their Personal or Medical Pending Registration Work Queue.

Status Bar Sections

/Personal Valid/Medical Valid With Exceptions/Registered/Signed/Certified/NA/Cremation Clearance Approved				
1	2	3	4	5

1. This can be *Personal Valid*, *Personal Invalid* or *Personal Valid with Exceptions*.
2. This can be *Medical Valid*, *Medical Invalid* or *Medical Valid with Exceptions*.
3. Indicates if a record is *Registered* or *Not Registered*. This section will also show if a record has been voided or abandoned.
4. Indicates if the personal information has been *Signed* or *Not Signed*.
5. Indicates if the medical certification page has been *Certified* or *Not Certified*.

There can be many variations to the Status Bar. Please contact the BVR with any questions.
