

Arizona Lead Screening Scorecard 2016

60% of cases* did not get a repeat test within the recommended timeframe in 2016.

How is Arizona doing?

The goal of screening 35% of at-risk+ children was not met.

While screening rates of individual age groups have increased since 2014, the rate of screening at-risk children at both recommended ages of 12 & 24 months has not changed.

* children who have had a blood lead level $\geq 5 \mu\text{g/dL}$
+ children who live in a high-risk zip code

76%

of cases* under 6 years old lived in a high-risk zip code in 2016.
